PROFESSIONAL SUMMARY

AI/ML & Generative AI Engineer with 3+ years of experience developing production-grade LLM applications, RAG pipelines, and full-stack AI products. Strong foundation in data engineering, data validation workflows, and backend API integration. Proven track record of architecting scalable SaaS platforms, deploying vector search architectures, and delivering 20+ ML/DL models across NLP and Computer Vision. Proficient in Python, SQL, FastAPI, LangChain, FAISS, Docker, and Cloud (AWS/GCP/DigitalOcean).

WORK EXPERIENCE

TCS, Associate Software Engineer 12/2025 – 05/2026 | Hyderabad

- Designed and implemented ML pipelines for structured client datasets covering data ingestion, preprocessing, and model training.
- Optimized SQL queries and database schemas to handle large-scale data extraction, improving preprocessing data ingestion speeds by 20%.
- Performed EDA, data preprocessing, and feature engineering using Pandas and NumPy on datasets ranging from 10K to 50K records.
- Built classification models using Scikit-learn, achieving ~82–87% accuracy on validation datasets. Deployed ML model via Flask REST API for internal inference workflows.
- Automated data preprocessing pipeline reducing manual effort by ~25–30%. •Used SQL for data extraction and transformation to prepare model-ready datasets.
- Tracked and versioned ML experiments using Git, ensuring reproducibility across development iterations.

Tech Mahindra, Associate 09/2024 – 11/2025 | Hyderabad

- Worked on the client project using the Workflow Management System (WFMS) to handle and process structured data.
- Engineered high-volume unstructured and semi-structured text data pipelines within the Workflow Management System (WFMS) to prepare high-fidelity inputs for training downstream NLP and LLM architectures.
- Performed doc auditing and data correction to maintain high accuracy and data integrity.
- Supported data validation and quality checks, reducing discrepancies and improving workflow reliability.
- Designed and implemented robust data validation algorithms and quality verification workflows, eliminating label noise and reducing feature discrepancies by 20%.

BO IT Solutions Pvt Ltd, AI/ML Data Scientist 08/2022 – 06/2024 | Hyderabad

- Delivered 20+ end-to-end AI/ML projects across NLP, Computer Vision, and Deep Learning, covering the full pipeline from data collection to model deployment
- Performed EDA and feature engineering on datasets of 10K–100K+ records using Pandas, NumPy, and Matplotlib, reducing data preprocessing time by ~30%
- Built and evaluated classification and regression models using Scikit-learn and TensorFlow, consistently achieving 80–90% accuracy across multiple project deliveries
- Implemented CNN and LSTM-based deep learning models for image classification and sequence prediction tasks, improving baseline accuracy by ~15% over traditional ML approaches.

EDUCATION

B.Tech, Aditya University 2018 – 2022 | Surampalem, Andhra Pradesh
Electronics And Communication Engineering

TECHNICAL SKILLS

Generative AI & Agents — LLMs, RAG Pipelines, Semantic Search, Vector Databases, LangChain, LlamaIndex, Prompt Engineering, Agentic Workflows, ADK & MCP

Programming & Backend — Python, SQL, FastAPI, Flask, REST APIs

Machine Learning & DL — Scikit-learn, TensorFlow, Keras, CNN, LSTM, NLP, Feature Engineering, Model Evaluation

Data Engineering & DBs — Data Validation, Data Preprocessing, ETL Pipelines, SQL, Pandas, NumPy, MongoDB, MySQL,

Cloud & Developer Tools — Docker, Git, VS Code, GitHub Copilot, GCP, AWS, DigitalOcean

HACKATHON PARTICIPATION

National AI Hackathon - i2e Consulting, *Project: Complex Technical Manual QA System using RAG* Bangalore

- Built a production-grade RAG system ingesting and indexing 885 semantic vectors from the 270-page NASA Systems Engineering Handbook using FAISS and sentence-transformers (all-MiniLM-L6-v2)
- Integrated Groq API (LLaMA-3.3-70B) with confidence scoring (0–100%), multi-turn conversation memory, section-level citations, and NASA acronym expansion (20+ terms: TRL, PDR, KDP, SRR)

Stack: FastAPI | FAISS Groq API | LLAMA 3.3-70B | sentence-transformers | PyPDF | Vanilla JS | Python | PdfPlumber

KEY PROJECTS

PinGuru — Instagram DM Automation SaaS,

Python | FastAPI | MongoDB | Instagram Graph API | DigitalOcean | Stripe | GitHub Pages

- Architected and deployed **Pinguru**, a full-stack Instagram automation SaaS (pinguru.me) featuring real-time DM triggers and multi-tier Stripe billing. Built with a **FastAPI/MongoDB** backend and **Instagram Graph API**, the platform integrates robust security (JWT, OTP) and automated comment-to-DM workflows.

Complex Technical Manual QA System Using RAG, i2e-Consulting

https://github.com/Ajaysomala/i2e_Hireathon-Complex_Technical_Manual_QA_System 

- NASA Manual QA System | RAG Pipeline, Python | FastAPI | FAISS | Llama 3.3 | Groq | NLP. Designed a production-grade RAG pipeline using **FastAPI**, **FAISS**, and **Llama 3.3** to automate citation-backed QA for the 270-page NASA Systems Engineering Handbook.

Image Caption Generator, Python | CNN | LSTM | Deep Learning | NLP | FLICKR DataSet

- Built an end-to-end image captioning system using a CNN encoder for visual feature extraction and an LSTM decoder for sequential caption generation, trained on the Flickr8k dataset

Autonomous Multi-Agent Operations System,

Python | FastAPI | Groq API (Llama 3.3) | Multi-Agent Orchestration | Docker | SQLite | Pydantic

- Built a multi-layered AI agent system with increasing autonomy. A reflex layer handles known triggers with fixed rules. A single AI agent (Llama 3.3) interprets plain-language instructions and plans its own steps. For complex goals, a team of agents — Planner, Executor, and Reviewer — split the work, execute it, and self-correct through review. The whole system runs as a containerized FastAPI service with task memory.
